

\* Dari A:

$$K = 150 \text{ (A} \rightarrow \text{K)}$$

$$M = 200 \text{ (A} \rightarrow \text{M)}$$

mengambil jarak terkecil  $K = 150$

\* Proses K:

$$B \text{ via } K = 150 + 250 = 400 \quad \text{Prev}(B) = K$$

$$GM \text{ via } K = 150 + 180 = 330 \quad \text{Prev}(GM) = K$$

Node yang belum diambil  $M = 200$ ,  $GM = 330$ ,  $B = 400$

mengambil node yang paling kecil  $M = 200$

\* Proses M

$$TS \text{ via } M = 200 + 100 = 300, \text{ prev}(TS) = M$$

$$PS \text{ via } M = 200 + 300 = 500, \text{ prev}(PS) = M$$

Node yg blm diambil  $TS = 300$ ,  $GM = 330$ ,  $B = 400$ ,  $PS = 500$

mengambil node terkecil  $TS (300)$

\* Proses TS

$$TS \rightarrow SMP2 = 300 + 50 = 350$$

Selanjutnya jarak  $SMP2 = 350$ ,  $GM = 330$ ,  $B = 400$ ,  $PS = 500$

mengambil node terkecil  $GM (330)$

\* Proses GM

$$GM \rightarrow SMP2 = 330 + 70 = 400$$

Sisa node terkecil berikutnya  $SMP2 (350)$ . Dan  $SMP2$  adalah tujuan akhir

Jadi jalurnya

$A \rightarrow M \rightarrow TS \rightarrow SMP2$  Total jarak  $200 + 100 + 50 = 350$  m, jadi setelah terdapat  
lah  $SMP2$

Jarak ke SMA1 dan SD1

$$- \text{SMA1 via } M \rightarrow PS = 200 + 300 + 80 = 580 \text{ m}$$

$$- \text{SD1 via } K \rightarrow B \rightarrow MD \rightarrow HW \rightarrow JD \rightarrow SD1 \\ = 150 + 250 + 400 + 350 + 20 + 90 = 1360 \text{ m}$$

Nomer 2

Rute ke  $SMP2$ :  $A \rightarrow M \rightarrow TS \rightarrow SMP2$

Nomer 3

$A \rightarrow M = 200$   $TS \rightarrow SMP2 = 50$   
 $M \rightarrow TS = 100 \text{ m}$  Total = 350 meter
